WORK EXPERIENCE

Crescent- Ecommerce

Developed a full-stack e-commerce platform with user authentication, profile management, and secure payment integration. Implemented product browsing, shopping cart functionality, and transaction processing on the front-end using Tailwind CSS for a responsive design. On the back-end, built features for managing products, including adding, updating, and deleting items, with admin privileges for catalog management.

React Dashboard

Created a fully responsive, data-driven dashboard using React, Formik, and Tailwind CSS. Focused on intuitive data visualization and smooth form handling with Formik for validation and submission. Designed with Tailwind CSS to ensure a sleek and adaptive user interface across all screen sizes

Culinary-API

Built a JavaScript-based web app that fetches data from a food API to display recipes, ingredients, and cooking instructions. The app provides real-time API calls, offering users an intuitive interface to explore and discover new recipes.
